Terms of service Quick Character Addon for google docs

A quick way to add Unicode Characters and Symbols to a document without needing shortcuts or navigating through menus.
Freeware use at your own risk.
To use simply put the cursor where you want the character and click the corresponding button.
I made this for my own use, I published it as I think others will find it handy.
If you want more/different characters leave a review and I will get around to it when I have time.
